

Beyond DGS - Simulations and Scripting with Cinderella

Ulrich Kortenkamp, CERMAT / Martin-Luther-Universität Halle-Wittenberg, Germany

In this workshop we will explore the new facilities of the Interactive Geometry Software Cinderella.2 and work with physics simulations and custom scripts. For a sampler of what is possible see <http://www.mathe-vital.de>. A basic knowledge of any geometry software is required. Participants will receive a temporary license for the software and can use their own laptops or the lab facilities at the conference.
