## Definition

An ultrafilter  $\mathcal{F}$  on  $\omega$  is a *P*-point if for each  $\mathcal{C} \in [\mathcal{F}]^{\omega}$  there is a pseudo-intersection  $P \in \mathcal{F}$  such that  $P \subset^* F$  for each  $F \in \mathcal{C}$ .

## Definition

An ultrafilter  $\mathcal{F}$  on  $\omega$  is *selective* if for each  $\{A_i: i \in \omega\}$ , a partition of  $\omega$  disjoint with  $\mathcal{F}$  there is a selector  $S \in \mathcal{F}$  such that  $|S \cap A_i| = 1$  for each  $i \in \omega$ .

< □ > < 同 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

## Definition

An ultrafilter  $\mathcal{F}$  on  $\omega$  is a *P*-point if for each  $\mathcal{C} \in [\mathcal{F}]^{\omega}$  there is a pseudo-intersection  $P \in \mathcal{F}$  such that  $P \subset^* F$  for each  $F \in \mathcal{C}$ .

## Definition

An ultrafilter  $\mathcal{F}$  on  $\omega$  is *selective* if for each  $\{A_i: i \in \omega\}$ , a partition of  $\omega$  disjoint with  $\mathcal{F}$  there is a selector  $S \in \mathcal{F}$  such that  $|S \cap A_i| = 1$  for each  $i \in \omega$ .

Let  $\mathcal{F}$  be an ultrafilter in  $\omega$ . The following properties are equivalent:

1.  $\mathcal{F}$  is selective,

2. For each  $c \colon [\omega]^2 \to 2$  there exists a *c*-homogeneous set  $F \in \mathcal{F}$ ,

## Definition

An ultrafilter  $\mathcal{F}$  on  $\omega$  is a *P*-point if for each  $\mathcal{C} \in [\mathcal{F}]^{\omega}$  there is a pseudo-intersection  $P \in \mathcal{F}$  such that  $P \subset^* F$  for each  $F \in \mathcal{C}$ .

## Definition

An ultrafilter  $\mathcal{F}$  on  $\omega$  is *selective* if for each  $\{A_i: i \in \omega\}$ , a partition of  $\omega$  disjoint with  $\mathcal{F}$  there is a selector  $S \in \mathcal{F}$  such that  $|S \cap A_i| = 1$  for each  $i \in \omega$ .

Let  $\mathcal{F}$  be an ultrafilter in  $\omega$ . The following properties are equivalent:

- 1.  $\mathcal{F}$  is selective,
- 2. For each  $c \colon [\omega]^2 \to 2$  there exists a *c*-homogeneous set  $F \in \mathcal{F}$ ,

3.  $\mathcal{F} \cap \mathcal{I} \neq \emptyset$  for each tall analytic ideal  $\mathcal{I}$ .

## Definition

An ultrafilter  $\mathcal{F}$  on  $\omega$  is a *P*-point if for each  $\mathcal{C} \in [\mathcal{F}]^{\omega}$  there is a pseudo-intersection  $P \in \mathcal{F}$  such that  $P \subset^* F$  for each  $F \in \mathcal{C}$ .

## Definition

## Definition (Mathias-Příkrý forcing)

Let  $\mathcal{F}$  be a filter on  $\omega$ .

$$\mathbb{M}(\mathcal{F}) = \{ \langle a, F \rangle \colon a \in [\omega]^{<\omega}, F \in \mathcal{F} \}$$
  
$$\langle a, F \rangle < \langle b, H \rangle \quad \text{if} \quad b \sqsubseteq a, F \subset H, \text{ and } a \setminus b \subset H.$$

Definition (Mathias real for  $\mathcal{F}$ )  $x = \bigcup \{a: \langle a, F \rangle \} \in \mathbb{G}$ , where  $\mathbb{G}$  is an  $\mathbb{M}(\mathcal{F})$  generic filter. Fact

A Mathias real is a pseudo-intersection of  $\mathcal{F}$  ( $x \subseteq^* F$  for each  $F \in \mathcal{F}$ ).

## Definition (Mathias-Příkrý forcing)

Let  $\mathcal{F}$  be a filter on  $\omega$ .

$$\mathbb{M}(\mathcal{F}) = \{ \langle a, F \rangle \colon a \in [\omega]^{<\omega}, F \in \mathcal{F} \}$$
  
$$\langle a, F \rangle < \langle b, H \rangle \quad \text{if} \quad b \sqsubseteq a, F \subset H, \text{ and } a \setminus b \subset H.$$

Definition (Mathias real for  $\mathcal{F}$ )  $x = \bigcup \{a: \langle a, F \rangle \} \in \mathbb{G}$ , where  $\mathbb{G}$  is an  $\mathbb{M}(\mathcal{F})$  generic filter. Fact

A Mathias real is a pseudo-intersection of  $\mathcal{F}$  ( $x \subseteq^* F$  for each  $F \in \mathcal{F}$ ).

### Definition

 $U \subset [\omega]^{<\omega}$  is an  $\mathcal{F}$ -universal set if  $[F]^{<\omega} \cap U \neq \emptyset$  for each  $F \in \mathcal{F}$ .

# Fact $[x]^{\leq \omega} \cap U \neq \emptyset$ for each $\mathcal{F}$ -universal set U.

### Definition (Pseudogeneric real for $\mathcal{F}$ )

Let  $\mathcal{F}$  be a filter on  $\omega$ . A set  $m \subset \omega$  is a *pseudogeneric real for*  $\mathcal{F}$  if

< □ > < 同 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

- 1.  $m \subseteq^* F$  for each  $F \in \mathcal{F}$ ,
- 2.  $[m]^{<\omega} \cap U \neq \emptyset$  for each  $\mathcal{F}$ -universal set U.

## Definition (Pseudogeneric real for $\mathcal{F}$ )

Let  $\mathcal{F}$  be a filter on  $\omega$ . A set  $m \subset \omega$  is a *pseudogeneric real for*  $\mathcal{F}$  if

- 1.  $m \subseteq^* F$  for each  $F \in \mathcal{F}$ ,
- 2.  $[m]^{<\omega} \cap U \neq \emptyset$  for each  $\mathcal{F}$ -universal set U.

### Theorem

If  $m \subset \omega$  is a pseudogeneric real for  $\mathcal{F}$  and  $c \subset \omega$  is a Cohen real, then  $m \cap c$  is a Mathias real for  $\mathcal{F}$ .

# Theorem (LC) $\mathcal{F}$ is a $\mathbb{Q}_{\mathcal{I}}$ -generic filter over $L(\mathbb{R})$ iff

- 1.  $\mathcal{F}$  is a P-point disjoint with  $\mathcal{I}$ , and
- for each closed set C ⊂ P(ω) disjoint with F there is e ∈ F\* such that C ⊆ ⟨I, {e}⟩.

# Theorem (LC) $\mathcal{F}$ is a $\mathbb{Q}_{\mathcal{I}}$ -generic filter over $L(\mathbb{R})$ iff

- 1.  $\mathcal{F}$  is a P-point disjoint with  $\mathcal{I}$ , and
- for each closed set C ⊂ P(ω) disjoint with F there is e ∈ F\* such that C ⊆ ⟨I, {e}⟩.

#### Lemma

Let  $\mathcal{U}$  be a P-point. Assume there is (in some extension of V) an elementary embedding  $j: V \to M$  such that  $\mathbb{R} \cap V$  is countable in M. Then there is a Mathias real  $g \in j(\mathcal{F})$  (over V).

# Theorem (LC) $\mathcal{F}$ is a $\mathbb{Q}_{\mathcal{I}}$ -generic filter over $L(\mathbb{R})$ iff

Let  $\mathcal{F}$  be as in the theorem. Suppose  $D \in L(\mathbb{R})$  is open dense in  $\mathbb{Q}_{\mathcal{I}}$ . Then  $\mathcal{M}(\mathcal{F}) \Vdash g \in D^{V[g]}$ .

Suppose  $D \in L(\mathbb{R})$  is open dense in  $\mathbb{Q}_{\mathcal{I}}$ . We need to show that  $D \cap \mathcal{F} \neq \emptyset$ .

Pass to an extension V[G] where  $j: V \to M$  exists.

Let  $\mathcal{U}$  be a P-point. Assume there is (in some extension of V) an elementary embedding  $j: V \to M$  such that  $\mathbb{R} \cap V$  is countable in M. Then there is a Mathias real  $g \in j(\mathcal{F})$  (over V).

#### Lemma

Let  $\mathcal{F}$  be as in the theorem. Suppose  $D \in L(\mathbb{R})$  is open dense in  $\mathbb{Q}_{\mathcal{I}}$ . Then  $\mathcal{M}(\mathcal{F}) \Vdash g \in D^{V[g]}$ .

Pass to an extension V[G] where  $j: V \to M$  exists. There is a Mathias real  $g \in j(\mathcal{F})$ . Now  $g \in D^{V[G]}$ , i.e.  $g \in j(D) \cap j(\mathcal{F})$ .
