PREFACE	1–3
Sandro Coriasco, Luigi Rodino: Ellipticity in the SG calculus	5–30
Aleksandar Ivić: Some applications of Laplace transforms in analytic number theory	31–44
Tijana Levajković, Stevan Pilipović and Dora Seleši: Chaos expansion methods in Malliavin calculus: A survey of recent results	45–103
Vesna Manojlović: On bilipschicity of quasiconformal harmonic mappings ..	105–109
Dennis Nemzer, Jasson Vindas: An elementary approach to asymptotic behavior in the Cesàro sense and applications to the Laplace and Stieltjes transforms	111–124
Stevan Pilipović, Nenad Teofanov, Filip Tomić: On a class of ultradifferentiable functions	125–142
Pavel Dimovski, Bojan Prangoski, Jasson Vindas: Translation-invariant spaces of quasianalytic ultradistributions	143–175
Dimitris Scarpalezos: Average strong association and comparison of regularities	177–181
Diana T. Stoeva: On frames, dual frames, and the duality principle	183–200
Mirjana Vuković, Ivana Zubac: Abel type theorems for the wavelet transform through the quasiasymptotic boundedness	201–206
Chikh Bouzar, Mohammed Taha Khalladi, Fatima Zohra Tchouar: Almost automorphic generalized functions	207–214
Günther Hörmann: Conical spacetimes and global hyperbolicity	215–229
Eduard A. Nigsch: Some extensions to the functional analytic approach to Colombeau algebras	231–240
Yasunori Okada: A Massera type theorem in hyperfunctions in the reflexive locally convex valued case	241–251
László Simon: On a system of nonlinear partial functional differential equations	253–265
Todor D. Todorov: Steady-state solutions in an algebra of generalized functions	267–283
Jitendra Kumar Dubey, Anuj Kumar, S.K. Upadhyay: Pseudo-differential operators and Localization operators on $S_{\nu}^{\mu}(\mathbb{R})$ space involving fractional Fourier transform	285–301
